

PIPE STRESS ANALYSIS

For decades now, LISEGA has offered its customers high quality products & professional services for complex pipe systems, both in the fields of new construction & modification, and maintenance & repair. To complete our range of services, **we now offer pipe stress analysis using the latest software systems.**

Experience has shown that pipe systems behave differently in practice than theoretical calculations lead one to expect. The reasons for this can be numerous, e.g. spring relaxation, ill-conceived modification work, poor maintenance, unprofessional service work by third parties etc.

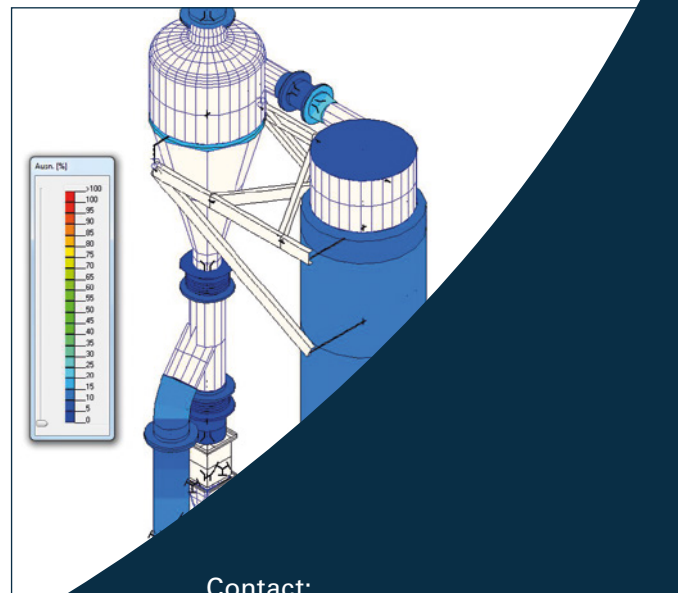

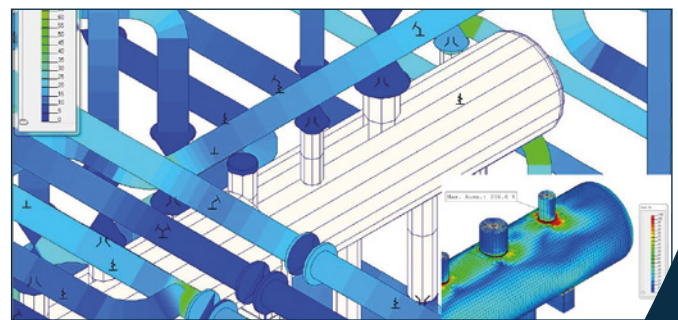

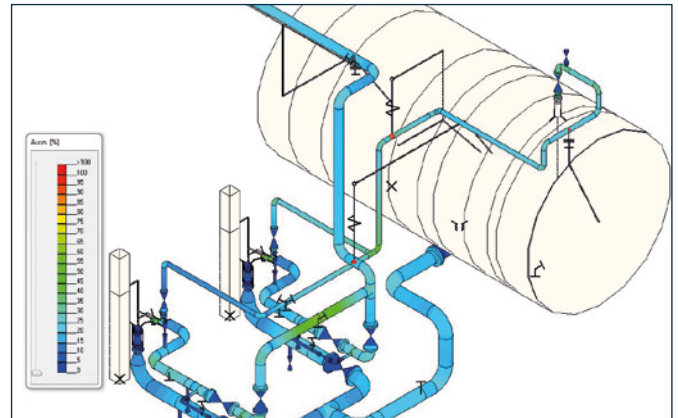

Now, with its pipe stress analysis service, LISEGA's experienced field service team can react to problems even more rapidly.

Our services:

- Complete solutions from one source
- On-site pipe system review & recording by our field service team
- Pipe stress analysis for verification & documentation
- Support design

The extra benefit for our customers:

- Minimization of downtime through break downs
- Lower costs due to maximized availability
- High operational safety of your plant through timely prevention
- Interface reduction
