

HITEM®

Thermally insulated
pipe supports

HITEM®-pipe supports – Efficient insulation for the highest process temperatures

HITEM® pipe supports with integrated calcium silicate insulation from LISEGA are designed for demanding applications at highest process temperatures. They effectively minimize heat loss and often offer economic advantages over uninsulated pipe supports made of high-alloy steels.

The optimized design – developed as a solution for common challenges in pipe support technology – gives **HITEM®** pipe supports high stability, secure mounting and a long service life – even under extreme conditions. The design is based on international technical regulations and meets the highest quality standards.

The areas of application, i.a.:

- Petrochemical industry
- Process industry
- Solar thermal power plants

Key technical data:

- Pipe diameters from OD 21.3 mm to 965.2 mm
- Insulation thicknesses from 25 mm to 250 mm
- Designed for temperatures up to 650 °C*

*Individual project-specific solutions and the design for higher thermal loads can be implemented at any time after appropriate technical clarification.

HITEM[®] – makes the difference!

SECURE MOUNTING

The innovative clamping mechanism ensures a secure hold – no relative movement between pipe and insulation!

DESIGNED FOR CONTINUOUS USE

Our pipe supports prove their robustness in extensive load tests.

FOCUS ON QUALITY

Our insulating materials undergo strict quality controls, including material tests for each batch – for a consistently high material quality.

LESS INTERNAL TENSION

We use a segmented design to reduce stress on the insulation material – for greater stability and a longer service life.

WATER-REPELLENT COATING

For additional protection against moisture and the associated loss of insulation performance.

TECHNICALLY SOPHISTICATED

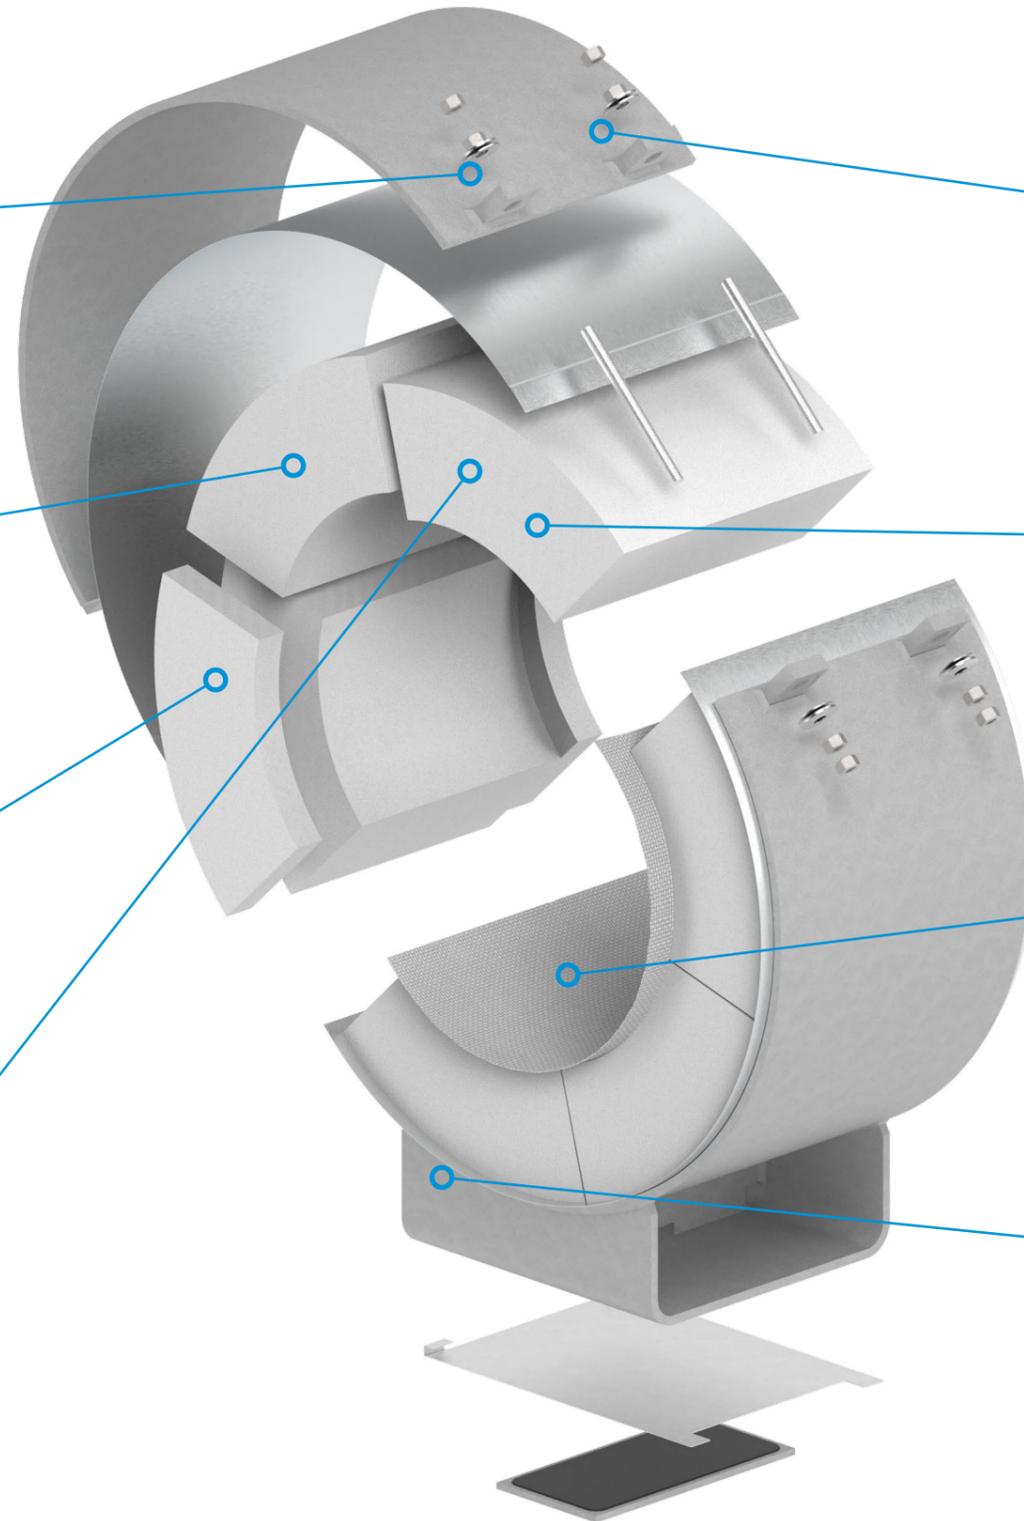

The compensating layer between the pipe and insulation reduces load peaks and ensures long-term material integrity.

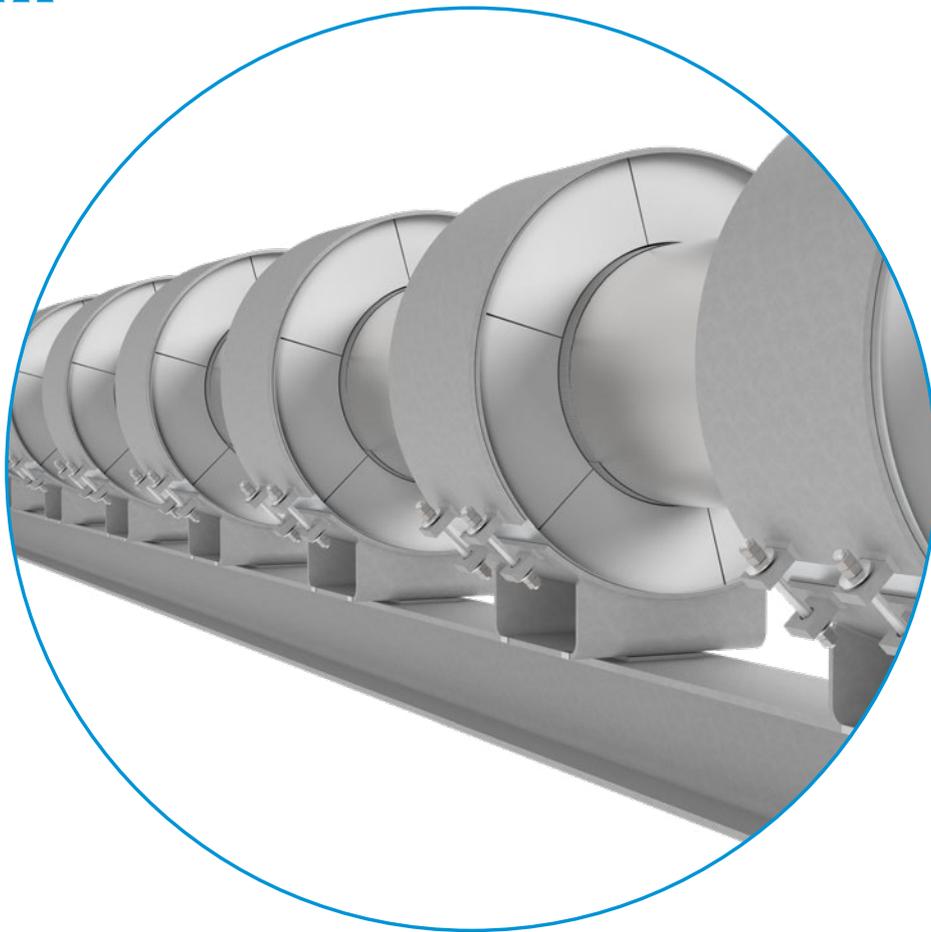

QUICK & EASY ASSEMBLY

The segmented insulating blocks enable easy and time-saving installation on site.

FLEXIBLY BESPOKE

From integrated recesses for heating cables to axial stops and suspensions: We create customized special solutions.
