

SPRING HANGER

SPRING HANGERS FOR SEATING TYPE 25..15

STANDARD DESIGN

REIMAGINED – WITH PROVEN PERFORMANCE

The next generation of our Type 25 spring hanger combines optimized mounting with proven LISEGA performance. The base plate is now integrated – you get a compact product that combines the spring component and structural attachments in a single solution.

CLEAR IDENTIFICATION

The new type designation includes a "5" in the sixth position (example: 25 .. .5). This allows you to recognize the improved version at a glance.

SMOOTH REPLACEMENT

Form, fit, and function remain unchanged. The dimensions of the previous Type 72 base plate have been adopted – existing connection points can still be used, and the functional parameters remain the same.

STANDARDIZED AND ROBUST

Corrosion protection options are available for different environmental conditions – C3(m) (galvanized), C4(h) / HD (hot-dip galvanized), C5(h) (hot-dip galvanized and color-coated).

YOUR ADDED VALUE

Fewer components, simplified logistics, fast assembly, and secure identification throughout the project.

Invest in the future: streamlined design, standardized, robust, and compatible.

- Download LICAD 2026 now – the new product line is integrated
- Download the product data sheet on the website
- Schedule a personal consultation – we'll assist you with selection and design
